

Lab Tasks

MI102 - Network Systems and Security

Fachhochschule Kiel

Florian Caspar

Task 5 (1)

- Install Docker

- Note:

Please use docker commands from command line for all tasks. You should be familiar with all relevant docker commands after completion of this task.

Task 5 (2)

- Install Wordpress
 - Use a stack
 - Deploy the stack

Task 5 (3)

- Containerize an application of your choice
 - Use a Dockerfile to create your own image
 - optional:
 - Publish the image to Docker Hub or GitHub Packages
 - Deploy the image
- For example, you can use a PHP- or Node.js-application.

Task 5 (4)

- Configure the following security systems to protect your application:
 - Network Firewall
 - IPS
 - WAF
